

FinBridge

Small Business Credit Cards in the UK

The credit card that runs a small business — spend, bills, fund with credit, get cashback.

Built by the SME credit team from Revolut and Capital on Tap

The Problem

EU & UK SMEs are underserved

Banks won't lend

Low risk appetite, weeks of paperwork

Not worth it for a £20k limit

~€400bn SME credit gap in the EU/UK

Neobanks — debit focus

"Business account" = debit card + invoices

No true revolving credit

Legacy card issuers

Dated UX

Built for large companies, not SMEs

Source: [EIB Group](#) (EU SME credit gap, €323–481bn); [Reuters / ECB Bank Lending Survey](#), Feb 2026

The Customer

Nadia — Wildroot Skincare, Manchester. £1.9m, four staff.

What she runs today

£45k/month of Meta and Google on a **personal** Amex in her own name. Tide for cash. iwoca at 42% for stock.

Three logins. One personal guarantee. Nothing back on £540k a year of spend.

02:14, Black Friday week

Meta's billing threshold hits the Amex limit. Six ad sets pause. She finds out at 07:00.

Learning phase resets, CPA +34% for four days. **~£18k of Q4, gone.**

What we give her

£75k in three minutes — underwritten on her Shopify and her ad account, not her filed accounts.

Raised to £110k *before* she hits it. Carries £38k priced in pounds, and still spends.

The Insight

Standalone credit attracts the wrong borrowers

Credit only offering

Hard acquisition, desperate borrowers

Poor data visibility

Adverse selection loop: high risk <-> high prices

EDITORS' PICK | MONEY > FINTech

Struggling Online Lender OnDeck Sold To Enova

**May Halt All Operations After
Remaining Loans Run Down**

October — French SME lender, 2025

+ Kabbage, Silvr and more — hundreds of millions in VC capital, zero survivors

Account + rewards + credit

Customers come for non credit reasons

Credit funds cashflow of a working business

Positive loop: more data, better product

Capital on Tap · YouLend

Profitable — credit paired with rewards /
embedded distribution

The Competition

We start where the economics is proven, then move up as we add the account features.

WHY NOW: debit players are planning to add credit, but they lack credit-first culture and expertise. We have several years of headstart

Source: Public product pages (Revolut, Tide, Monzo, Apron, Qonto, Ramp, Payhawk, Pleo, Pliant, Amex, Capital on Tap, iwoca, Funding Circle)

The Solution

Credit Card Embedded to a Business Account

1. Get it in 5 minutes

Limits up to **£250k**, start spending the same day. Limit stays there without reapplying

2. Manage cashflow

Pay bills, get paid, control team spend. Pay with debit or credit funds to manage your cashflow

3. Receive rewards

1% **cashback** on spend

Today this takes a bank, a card platform and a lender. We are all three.

The Team

Capital on Tap and Revolut alumni

Ex-Capital on Tap

Built the data infrastructure and credit risk engine for Capital on Tap — now serving 200k+ SMEs, £20B+ transaction volume, and the largest non-bank SME credit card ABS in Europe.

Ex-Revolut

Revolut Head of SME Lending. Built credit risk models powering \$1.5bn in small business loans in EEA. Led 10 launches of Revolut consumer and business credit products across EU, APAC and UK.

Ex-Revolut, Ex-Wio Bank (UAE)

Head of Product for Credit at Revolut and Head of Product at Wio. Built Wio's business card, commanding 1/3 of UAE volume. Launched and scaled Revolut consumer credit products across EU and UK.

SME credit is very hard. We know how to succeed.

Our Edge

Credit-first, product and speed of scaling

SME Credit expertise ↑

SME lenders — Capital on Tap · iwoca: credit muscle, but slow-moving and local by design

Us — credit-first DNA + AI-native speed, built to scale globally

Banks — neither: risk appetite, committees, no SME focus

Fintech platforms — Revolut · Tide · Qonto: ship fast, but credit is a cautious add-on. Debit first.

Product, Execution & Scaling →

Credit-first DNA — the core muscle, not an add-on

AI shortens the build — years compressed into months

Scar tissue, not theory — we've run these playbooks before

Business Model

£ / CUSTOMER / MONTH	REVOLVER	TRANSACTOR	SUPER-TRANSACTOR
Share of customers	40–60%	40–60%	~10%
Interest revenue	£267 40% APR × £8.0k avg balance	—	—
Cost of funding	(£53) ~8% × £8.0k balance	(£33) ~8% × £5.0k avg balance	(£70) ~8% × £10.5k avg balance
Interchange revenue	£90 1.8% × £5.0k monthly spend	£120 1.8% × £6.7k monthly spend	£480 1.8% × £26.7k monthly spend
Cost of rewards	(£50) 1% × £5.0k spend	(£67) 1% × £6.7k spend	(£267) 1% × £26.7k spend
Bad debt	(£70) ~10% of balance p.a.	(£5) ~1% of balance p.a.	(£10) ~1% of balance p.a.
Other costs	(£5)	(£5)	(£5)
Monthly gross margin	£179	£10	£128

Go-to-Market

A narrow UK wedge, chosen so the economics work from day one

1. Limited companies

Lending to incorporated businesses sits outside the Consumer Credit Act. No FCA credit permission, no regulatory capital.

2. Tickets under £200k

Too small for banks to process, too small for corporate lenders to call — and far less price-sensitive than the top end.

3. Direct mail

The one channel this team has already run at scale. Operationally lean — acquisition without a sales floor.

~£500 CAC against ~£123 blended monthly margin — **payback inside 6 months**, scaling to 2k+ customers / month

Path to £200m profit in the UK alone

- 1 MONTHS 0-6 · BUILD
Book <£1m · first 100 cards
- 2 MONTHS 6-18 · PROVE
Book ~£10m · GM run-rate ~£1.5m

Use of Funds

£5m · 18 months to a funded book

Risk capital	£1.5m	30%	<i>Equity funds first originations, then first-loss under the warehouse</i>
Team	£1.4m	28%	<i>3 → 10 FTE — credit risk, engineering, MLRO</i>
Cards & payments rails	£0.9m	18%	<i>BIN sponsor + EMI partner — setup and platform fees, issuer processor, bureau & KYB, settlement collateral</i>
Legal & compliance	£0.6m	12%	<i>No FCA credit permission — limited companies only. AML / KYB framework, credit agreements, SPV & facility docs</i>
Go-to-market	£0.6m	12%	<i>~1,000 SMEs at a blended CAC under £600</i>
Total	£5.0m	100%	<i>12 months of runway</i>

Gets us to: **warehouse drawn · £10m book · ~£1.5m GM run-rate**

Appendix: Market

Demand is documented, not assumed

~39M

SMEs in EU & UK

34M EU + 5.7M UK private-sector SMEs

30–40%

Need revolving products

The most frequent financing need in our own SME surveys and in ECB SAFE — consistent across geographies

19%

Already use a credit card

The single most used external finance product for UK SMEs — ahead of overdrafts (16%) and leasing (13%)

They already spend on cards and already need revolving — the product is the intersection.

Appendix: Borrower Economics

Maria, founder Skincare LTD, Manchester

First hot Saturday in June, she's sold out of ice, cold drinks and sunscreen by lunchtime. The queue spends the rest of the weekend at the Co-op down the road.

She knows in May exactly what to order. She just doesn't have the £20k — the till empties every Friday on rent and wages.

HER SUMMER SEASON

Extra stock she can't buy today	£20,000
---------------------------------	---------

Sold through by August, at 100% markup	£40,000
--	---------

Interest at 40% APR, paid down as she sells	(£1,000)
---	----------

Profit she can't earn otherwise	£19,000
--	----------------

£19,000 of profit for £1,000 of interest — and all three players on *The Problem* still pass on the ticket.

Illustrative economics for a seasonal retailer; markup and sell-through assumptions from FinBridge SME interviews

Product Differentiation

Neobanks don't know credit; lenders don't know cards
